When we think about how to support our babies’ development, we usually consider the basics: keeping them comfortable, safe and healthy, and ensuring they sleep well and get enough to eat. But what about building our babies’ brains?

Your Baby’s Development Begins With His Brain
A child’s earliest experiences are key to building the physical structure of the brain. And while every child develops at their own pace, a healthy brain supports development in all areas. This means that doing what you can to support healthy brain development in the first days, months and years of your child’s life can help him enjoy a lifetime of good overall health.

How Can You Build Your Baby’s Brain?
By communicating with your baby, you can help build his brain. Experts call these brain-building moments between a child and caregiver “serve and return” interactions.

What are “serve and return” interactions?
Paying attention and responding with warmth, support and enthusiasm to what your child communicates. Imagine a tennis game between a caregiver and a child. But instead of hitting a ball back and forth across a net, they send and get different types of communication, such as touch, sounds, words, smiles and eye contact.

Serve and return interactions help build a solid foundation for your baby’s brain – and support all future development. Serve and return interactions also build attachment (see Developing Attachment) between you and your baby.

On their own, these moments may feel short and unimportant. But a lot of serve and return interactions throughout the early years help build new connections in your child’s brain and encourage him to learn.

Each positive interaction is another brick in a healthy foundation for all of your baby’s later development. Together, they set him up for success in everything from learning to read to dealing with stress to forming healthy relationships.

KEY TAKEAWAY
Early experiences play a big role in shaping your baby’s brain. And strong brain development supports your baby’s growth in all other areas.

DID YOU KNOW
The Canadian Paediatric Society recommends no screen time for children under the age of 2. See Toddler’s First Steps for more information about screen time.

TRY THIS
Put aside your cell phone when you’re around your baby so that you can focus on him.

DID YOU KNOW
You can’t spoil your baby by giving him too much attention. Your baby isn’t being bad when he cries or gets upset. He’s just telling you that he needs something. For ideas on how to deal with intense crying, see Crying.
HOW TO
Use serve and return interactions

- Pay a lot of attention to your baby and watch for his cues.
- Take note of what interests him, whether it’s a bright color, a fluffy dog or a spinning wheel.
- Talk to him regularly. Chat about what you’re doing, what he sees and what gets his attention.
- Cuddle and comfort him when he cries or is upset.
- Smile back when he smiles.
- Coo back when he coos.
- Make lots of eye contact.
- Sing songs.
- Play simple games like peek-a-boo.
- Read to your baby, and respond to what interests him on the page.
- Say the name of an object when your baby looks at it.
- Hold him, touch him and cuddle him skin-to-skin.

See the Brain Builder boxes throughout this book for more ideas on how to support your baby’s brain development through everyday activities.
