Toddlers may be small, but they need a lot of stuff. You can keep it all safe by:

✔ choosing equipment that’s right for your toddler’s height, weight and age
✔ supervising your toddler whenever she’s using it
✔ ensuring it’s in good condition by checking often for sharp edges, loose wheels, broken brakes and upholstery tears
✔ using safety straps and a helmet as appropriate
✔ following manufacturers’ instructions for assembly, care and use

BE AWARE

BE AWARE
Chairs that hook on a table can fall. If you need to use one, be sure to attach it to a strong table away from table legs. Before putting your child in, pull on it to check that it’s solidly attached. If your child is over 13½ kg (30 lb) or is very active, don’t use a hook-on chair.

BE AWARE
Keep the chair away from walls and counters. Your child might be strong enough to push against them and tip herself over.

Safer Chairs

High chairs
Look for:
• wide base
• strong tray locks
• proper locking device on folding chairs
• no moving parts for your child to get caught in when you’re changing the position of the chair or tray

Ensure:
• safety strap is done up
• chair is placed away from appliances, windows, blind cords, mirrors and sharp corners

Booster chairs
Ensure:
• booster is safely strapped to a chair, and child is securely strapped in
• no shoulder straps are tangled around child’s neck
Safer Playpens

Look for:
- fine mesh that you can’t fit your little finger through
- no more than 2 wheels
- at least 48 cm (19 inches) high
- no rough or sharp edges or loose parts
- no drilled holes between 3 and 10 mm (⅛ and ⅜ inch)
- no hinges that can pinch or accidentally collapse
- no tears in rails or mattress pad
- no scarves, necklaces or cords
- no toys strung across the top
- all sides fully raised and firmly fixed

DID YOU KNOW
It’s best for your child’s development to let her walk whenever possible.

Safer Strollers

Look for:
- 5-point harness
- good brakes
- secure wheels
- no sharp edges or loose folding parts

Ensure:
- no purse or heavy packages on handle

BE AWARE
Don’t jog with your child in a stroller until she’s at least a year old and her neck muscles have strengthened. And always use the 5-point harness.

Safer Child Carriers

Front carriers

Look for:
- firm, padded head support
- leg holes your child can’t slip through
- made for your child’s weight

BE AWARE
Don’t use a carrier while skiing, jogging, biking, cooking or doing any other risky activity. Your child could be bumped, burned, thrown out or crushed under you.

Back carriers

Look for:
- wide, solid base
- padding near your child’s face

Ensure:
- straps and buckles are done up
- carrier isn’t used as a car seat
- carrier is used only for a child who can sit up by herself (5 months or older)
- carrier is never placed on a table or counter with your child in it

Refer to Baby’s Best Chance for information on safer car safety.

Safer Gates

Look for:
- manufactured after 1990
- safety-approved label
- right size for the space being blocked
- smooth finish, with no splinters, cracks or snags

Ensure:
- gate is mounted close to the floor so it can’t be crawled under
- gate is installed early so you’re ready when your child starts moving around on her own

For stairs, use swing gates that screw into the wall. Use one gate at the top of the stairs and another at the bottom. Don’t remove them until your toddler can climb stairs without help.

BE AWARE
Accordion-style or expandable gates can trap your toddler in their openings. Pressure gates (gates that press against the wall but don’t screw in) can be pushed over, so shouldn’t be used for stairs.

Safer Beds and Cribs

See Sleep and Your Toddler.

BE AWARE
Don’t jog with your child in a stroller until she’s at least a year old and her neck muscles have strengthened. And always use the 5-point harness.
**Safer Cycling**

Only ride with your child if you’re a skilled cyclist. And only go in safe areas like parks, bike paths and quiet streets when road conditions are good.

**BE AWARE**

Children under 12 months shouldn’t ride with you on a bicycle. Their back and neck muscles can’t support the weight of a helmet and can be damaged by the bumping.

**TRY THIS**

Before riding your bike with your toddler in a carrier or trailer, practise turning, stopping and climbing hills with a bag of flour.

**DID YOU KNOW**

Bicycle trailers are more stable than child seats mounted on a bike. In either case, you can be thrown off balance if your child moves suddenly.

**Bicycle-mounted child seats**

Ensure:
- child weighs 18 kg (40 lb) or less
- harness is buckled snugly
- toddler’s feet, hands and clothes aren’t near spokes or other moving parts
- toddler is never left alone in seat

**Bicycle trailers**

Look for:
- bike flag, tail light and reflector
- solid connection between trailer and bike
- secure harness

Ensure:
- used with 1 or 2 children weighing no more than 45 kg (100 lb) total
- toddler can’t reach the wheels
- toddler is protected from dirt thrown by tires

**Tricycles, scooters and push/run bikes**

Ensure all are:
- sized so your toddler can pedal while sitting comfortably
- used only with supervision
- never ridden near cars, swimming pools or stairs

**Helmets**

Look for:
- child-sized
- covers the upper forehead
- adjustable strap with quick-release buckle
- bright colour so she’s easily seen
- not purchased second-hand
- never been in a crash, dropped or damaged
- round, not aero-shaped
- approved by CSA, Snell, ANSI, ASTM, BSI or SAA

Ensure:
- sits straight – not tilted – on her head
- expiration date is checked regularly, and helmet is replaced at least every 5 years

**Safer Toys**

See Toys.

**DID YOU KNOW**

Baby walkers are banned in Canada. They move too quickly and can cause head injuries. Try an activity centre instead.

**DID YOU KNOW**

Bicycle trailers are more stable than child seats mounted on a bike. In either case, you can be thrown off balance if your child moves suddenly.

**KEY TAKEAWAY**

Your child must wear a helmet whenever she’s playing on a riding toy, bike, scooter or tricycle, or when she’s riding in a trailer or bike seat.

**TRY THIS**

Store your child’s helmet on the handlebars, ready for the next ride. Don’t leave it in the sun or in the back window of the car, where it can be damaged by heat.
